A nighttime photograph of a cityscape with snow-covered roofs. A prominent, illuminated Gothic church spire rises in the background against a dark blue sky. The foreground is dominated by a large, diagonal green banner with white text.

virtual meeting

8th ESO–ESMINT–ESNR Stroke Winter School

Goals

The primary goal of the ESO–ESMINT–ESNR winter school on acute interdisciplinary stroke treatment is to join young stroke physicians and young neuroradiologists in order to enhance interdisciplinary management of patients with acute ischemic stroke. A series of concentrated high quality teaching sessions and courses on acute stroke management will be offered.

The winter school is unique in its kind. Combining interdisciplinary plenum sessions, discussions and group tutorials, it will foster improvement in treatment of cerebrovascular disease and advance research in this complex field, leading to technical developments.

Due to the currently unpredictable situation regarding the COVID-19 pandemic the organizing committee has decided to hold the 8th ESO-ESMINT-ESNR Stroke Winter School 2021 as an exclusively virtual teaching course. The virtual version of the Stroke Winter School 2021 will still be endorsed by the European Stroke Organisation (ESO), the European Society of Minimal Invasive Neurological Therapy (ESMINT) and the European Society of Neuroradiology (ESNR).

Target audience

Young stroke physicians and neuroradiologists with a major interest in cerebrovascular diseases are eligible. Applicants should currently be in training in a European teaching hospital that treats acute stroke patients. The organizing committee will select 40 interventional neuroradiologists and 40 young stroke physicians based on their

- application
- country of origin
- the expected benefit to the individual and to his/her stroke unit and country

Since the main aim of the course is to enhance interdisciplinary stroke management, **pairs of neuroradiologists and stroke physicians from one institution will be preferred**. If there are available places, applications from non-European countries and single applicants may be considered by the organizers. The final decision about the participants remains with the local organisation committee.

Scientific content

A daily lecturing and teaching program in English by experts in all subspecialties of acute stroke treatment will be held in a digital and virtual format, including tutorials, case discussions, recorded live cases as well as virtual stroke workflow simulations. Teachers will be local, national and international experts in this or related fields. The course content will be hosted by a web-based online teaching platform of the Neurocenter of the University Hospital Inselspital Bern (www.neuronews.ch).

Tentative core faculty

The local organizing committee will form a tentative core faculty with representatives of all three participating organizations, i.e. European Stroke Organization (ESO), European Society of Minimal Invasive Neurological Therapy (ESMINT), and European Society of Neuroradiology (ESNR).

Costs

The course fee of the virtual ESO–ESMINT–ESNR Stroke Winter School will be € 100.–.

Deadline for application: 30. November 2020
